EDUCATION

University of Georgia

BS Mechanical Engineering, Aerospace Engineering Certificate

August 2023 – August 2026

Cumulative GPA: 3.7

Purdue University

BS Aerospace Engineering

August 2022 – Transferred May 2023

Cumulative GPA: 3.5

CERTIFICATIONS

Certified SOLIDWORKS Simulation Associate (CSWA-S) Dassault Systèmes

August 2026

Fundamentals of Engineering (FE) Exam – Passed NCEES

July 2026

WORK EXPERIENCE

Manufacturing Engineering Intern

August 2026 – Present

Gulfstream Aerospace

Peachtree Corners, GA

- Designed and tested multiple tooling components in CATIA with GD&T-driven drawings, including a wing fuel tank drain tool, a red-gear nose landing gear (NLG) tool, and a sponson reaming tool.
- Facilitated design reviews with floor technicians and produced 3D-printed prototypes to validate tooling functionality and manufacturability, incorporating shop-floor feedback into iterative design improvements.
- Modeled and detailed precision tooling parts in CATIA, producing manufacturing-ready designs for a range of assembly operations.

Mechanical Design Engineering Intern

May 2025 – August 2025

Omnimax

Peachtree Corners, GA

- Conducted competitor color portfolio analysis and spectrophotometric testing to develop a trim coil color match strategy projected to generate \$700K+ in annual revenue.
- Designed and executed a controlled downspout filter splash optimization experiment, guiding product redesign.
- Built a standardized CAD library of 20+ snow guard components in SolidWorks, streamlining manufacturing and reducing design ambiguity.

Manufacturing Engineering Intern

June 2024 – August 2024

Toyota

Bangalore, India

- Designed and presented an Automated Supply and Retrieval System (ASRS) using SolidWorks, significantly enhancing part bin transportation and reducing production downtime by 2 minutes per shift, saving \$28,000 daily.
- Presented a comprehensive kaizen proposal featuring an RFID-based automation system, using root-cause analysis.

PROJECT EXPERIENCE

Chief Engineer

August 2024 – May 2026

UGA AIAA Design, Build, Fly (DBF)

Athens, GA

- Leading team of 25+ members to design and build an RC aircraft from scratch, with cross-functional collaboration with aerodynamics, avionics, and structural teams.
- Simulated aircraft via MATLAB Multidisciplinary Optimization, Ansys Mechanical and Computational Fluid Dynamics.

LEARNSat-1 Mechanical Engineer

February 2025 – May 2026

UGA Small Satellite Research Lab

Athens, GA

- Thermal, Modal, and Static force simulation on CubeSat frame through Ansys FEA.
- Designing structure for LEARNSat-1 frame in Autodesk Inventor, utilizing design for manufacturing (DFM).
- Optimized manufacturing CubeSat frame using CAM for Tormach 1100 CNC mill.

Mechanical Lead

January 2025 – August 2025

NASA L'Space ACS3 Solar Sail Actuation

Remote

- Lead research on mechanisms for 2-state gimbal-based solar sail adjustment for satellite missions.
- Collaborated with NASA engineers with \$10,000 funding, conducting research, design reviews, and prototyping.
- Designed gimbal mounts and attachment points in Siemens NX12, optimizing thermal spread for space use.

Suspension Lead

August 2023 – May 2025

UGA Motorsports Formula SAE Electric

Athens, GA

- Designed and manufactured tie rods with SolidWorks FEA, resulting in a notable 15% improvement in cornering grip.

SKILLS

- CATIA, SolidWorks, Autodesk Inventor, Siemens NX-12, Ansys FEA & CFD, CNC Milling, GD&T, CAM, First Principles
